Solar-Dock
 Floating Generative Energy System

Sustainable Design for
 Floating Energy

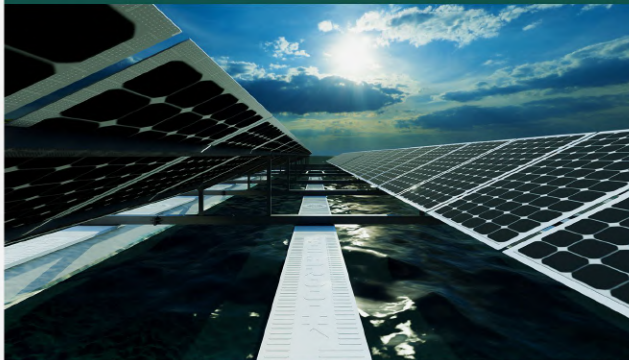

Easy Installation & Maintenance

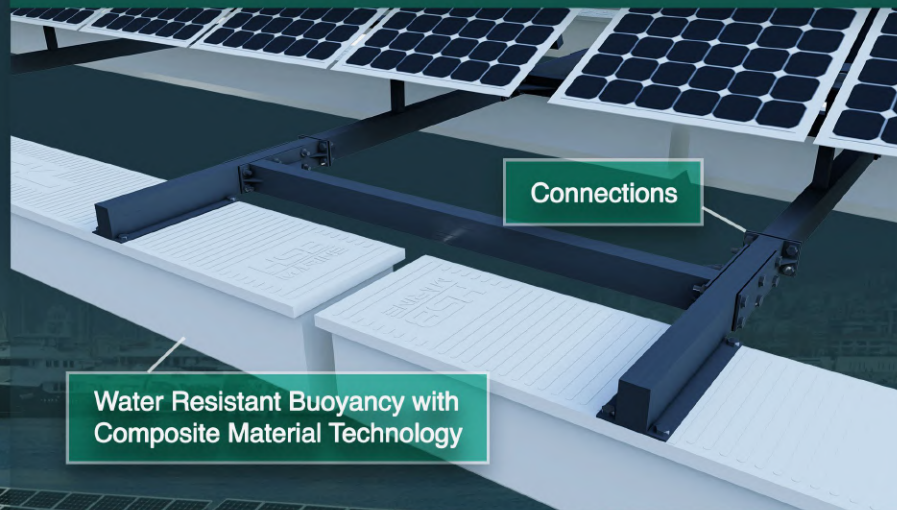

SolarDock floating solar panels system allows installation of standard PV panels on large bodies of water.

SolarDock is our state of the art solution for renewable energy needs.

Floating solar power plants are an innovative, sustainable development strategy; environmentally friendly SolarDock offers a source of renewable energy with no loss of farmlands.

It reduces water evaporation to effectively conserve irrigation and drinking water. In addition, the water's cooling effect on the solar panels yields more electricity.

Sustainable & Ecological

The energy for future, sustainable life
